Be creative...

LIQUID GLASS TILE
RANGE by PISANI

Be creative...

With our new Liquid Glass Tile Range. Combine traditional with contemporary, transform and enthral. This select range breathes life into any interior creating a distinctive environment.

A designer's dream – free your imagination.

General Info

Liquid glass tiles are created using advance technology and engineering. This consists of applying a specially formulated metallic/epoxy coating to a glass tile. The tile is treated several times to create the 'liquid' stereoscopic effect, which creates a distinctive glass product, perfect for interior decoration. Liquid Glass can be fabricated by simple glass tools and can suit a great variety of site situations and design requirements.

Liquid Glass has a laminated safety membrane on the laying surface of the tile; as a consequence if a tile was to break for any reason, the fragments would remain firmly bonded to the safety membrane.

Liquid Glass also incorporates these beneficial properties –

- High scratch resistance
- High resistance to corrosion
- High resistance to chemical attacks.

These unique Liquid Glass tiles are available in seven attractive colours and designs -Aqua, Copa, Curacao, Dunes, Luna, Velvet and Electric Blue.

Each tile can be supplied in two different sizes –
300 x 300 x 5mm
600 x 600 x 5mm

Applications

Liquid Glass is an ideal decorative material for numerous interior environments -

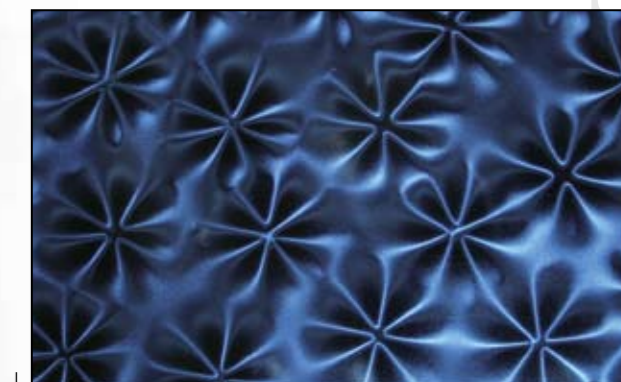

- Restaurants and Bars
- Hotels and Casinos
- Corporate developments
- Private Residencies

Laying Advice

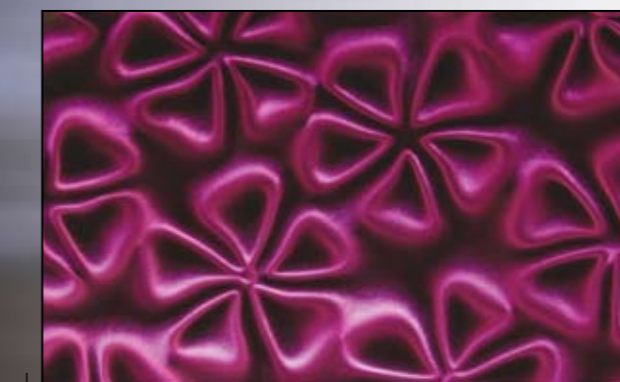

- The laying surface must be clean, smooth, even and without cracks. The laying surface can be drywall, plywood, particleboard and cured dried concrete.
- It is important to use the correct adhesive and grout for the location, Liquid glass is impervious, but you should consider using waterproof grout and adhesive in areas in regular contact with water.
- The tiles can be cut using a hand glass-cutter and nipper.
- To clean Liquid Glass use water and a standard domestic washing detergent.
